Abstracts

Artificial Upper Limb Joints are prosthetic components designed to replicate the anatomical and functional characteristics of human upper limb joints?primarily the shoulder, elbow, wrist, and finger joints?by enabling controlled, biomimetic movement through advanced mechanical, myoelectric, or hybrid systems. These devices range from passive, body-powered mechanisms to sophisticated microprocessor-driven prosthetics that interpret neuromuscular signals for intuitive motion, with many incorporating sensory feedback, adaptive grip patterns, and customizable socket interfaces to enhance user comfort, dexterity, and integration. The market serves individuals with congenital limb differences, trauma-related amputations, or surgical resections, with product development increasingly focused on improving cosmesis, reducing weight, expanding functionality, and leveraging materials such as carbon composites, titanium, and silicone to better simulate natural limb performance and durability.

The global Artificial Upper Limb Joints market size was estimated at USD 152.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
