Report Overview:

Artificial Zeolite or Synthetic zeolites, a class of inorganic silicate materials, are widely employed as heterogeneous catalysts in a variety of traditional and emerging catalytic processes, are sold into a wide range of industrial, commercial and consumer applications. Zeolites ability to selectively adsorb various molecules allows them to be used for water and contaminant removal from various industrial chemical feedstocks and in industrial gas separation. Unlike naturally occurring zeolites, synthetic zeolites are manufactured in energy-intensive chemical processes and are significantly more expensive than natural zeolite.

Synthetic zeolites are also designed to meet ion-specific exchange requirements in highly discriminating applications. The synthetic zeolite lattice is generally manufactured with a silica to alumina ratio of 1 to 1 as compared to the 5 to 1 ratio of natural Zeolite.

The Global Artificial Zeolite Market Size was estimated at USD 1576.04 million in 2023 and is projected to reach USD 1892.87 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
