Abstracts

Asbestos fiber cement board is a composite building material manufactured by combining cement, cellulose fibers, and chrysotile asbestos fibers under high pressure and autoclaving, resulting in a durable, fire-resistant, and water-resistant panel widely used in construction for applications such as roofing, siding, cladding, and interior partitions. Its primary historical advantages include high tensile strength, dimensional stability, and resistance to weathering, chemicals, and pests, though its use has declined significantly in many countries due to well-documented health risks associated with asbestos exposure, including asbestosis, lung cancer, and mesothelioma, leading to strict regulations, bans, and the development of asbestos-free alternatives.

The global Asbesto Fiber Cement Board market size was estimated at USD 9800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
