## Abstracts

Atrial septal defect (ASD) is one of the most common congenital heart defects requiring procedural intervention. ASD closure devices are intended to close openings between the atria (the two upper chambers of the heart). It can be used to treat patients with certain types of atrial septal defects. The medical closure devices market is driven by the increasing number of minimally invasive surgical procedures, as well as the growing aging population with chronic conditions. These devices play a crucial role in wound closure, reducing complications and improving patient outcomes.
