## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on ASD Tugboat competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global new construction and delivery volume of ASD tugboats was approximately 370 vessels, with an average unit price of approximately US\$7.34 million per vessel, an industry gross profit margin of approximately 16%–22%. ASD tugboats are a type of port and offshore operation vessel with 360° azimuth thrusters as their core, possessing high maneuverability and precise steering capabilities. Typical technical parameters are as follows: length 28–40 m, bollard pull 25–90 tons (mainstream is 40–75 tons), total continuous output power 1,500–6,000 kW (common configuration is two medium-speed or high-speed diesel engines in parallel), thrust device is a rotating geared rudder propeller or a fixed axial-flow rudder propeller with a yaw system, speed 10–13 knots, and hull and deck layout optimized for short-distance, high-frequency berthing and unberthing operations and lateral rudder support. In typical application scenarios, large container hubs and deep-water ports are typically equipped with 4–12 ASD tugboats per port to meet day and night service requirements (typical large container terminals such as Rotterdam/Singapore/Shanghai ports usually have 6–10 vessels); ocean towing/maritime support and rescue fleets are equipped with 1–3 vessels as needed. Supply Situation Upstream includes ship design, main engine diesel/gas turbines, propellers and gearboxes, marine steel plates and welded structures, heavy-duty transmission couplings and bearings, marine electrical and automation control systems. Raw materials and core components account for approximately 58%–68% of the total ship cost. Typical suppliers include Wärtsilä, MAN ES, KONGSBERG, SCHOTTEL, Rolls-Royce, ABB, Bureau Veritas/DNV-GL, and Robert Allan. Manufacturer Characteristics Damen has a significant delivery track record in

Europe and global hub ports. Sanmar and Uzmar have high delivery rates in the Turkish/Mediterranean and offshore markets. Uzmar Shipyards produces approximately 13 small to medium-sized ASD tugboats annually. Example In 2025, Moran received the William E Moran, built by Master Boat Builders shipyard in Corden, Alabama. This modern ASD tugboat, designed by Robert Allan, is designed for high-performance escort and ship support operations. The vessel is 92 feet long and 40 feet wide, with a bollard pulling capacity exceeding 80 tons. This tugboat is American Bureau of Shipping (ABS) certified and powered by two Tier IV compliant Caterpillar 3516E engines, producing a total of 6,770 horsepower. It has also achieved Low Emission Vehicle (LEV) certification, significantly reducing nitrogen oxide emissions and helping Moran Marine achieve its long-term sustainability goals by precisely and efficiently handling the increasingly large and complex vessels calling at U.S. ports. Applications For port berthing and towing (precise assistance for vessel berthing and departure), clients include Svitzer and Boluda Towage; for maritime support and PSV/OSV escort (logistical support for offshore operations), partners include Crowley and Seaspan; focusing on vessel escort and tanker/chemical transport fleet protection (safety protection for dangerous goods transport), representative clients are SMIT/Smit Lamnalco; for salvage/recovery and emergency response (rapid handling of sudden emergencies), core partners include Foss and Kotug; and for engineering/pipeline laying/specialized operation platforms (specialized offshore engineering support), we provide offshore towing services for Harbour Energy/Equinor. Technology Trends ASD tugboats are evolving towards hybrid power, gas/dual-fuel (LNG) propulsion, and partial electrification (series/parallel motors + energy recovery). Intelligence is reflected in the coordinated power management system and ship-to-shore energy dispatch (shore power and fast charging), automated steering, and convoy control (assisting semi-automatic barge transport and bow scheduling). Composite materials and hull optimization are used to reduce drag, thereby lowering fuel consumption and improving bollard pull/tonnage ratio. In the retrofitting field, thrusters can be upgraded to high-efficiency permanent magnet motors or fitted with short-duration high-power energy storage packs to meet the "start-up impact + short-duration high power" requirements. Remote diagnostics and preventative maintenance are becoming crucial modules for reducing operational disruptions. Market Impact The IMO's net-zero emissions roadmap and regional regulations (such as the EU FuelEU Maritime / EU ETS and North American port low-emission zone policies) are reshaping the demand side of the tugboat market? creating dual pressure on traditional pure diesel ASD tugboats: On the one hand, traditional diesel engine solutions still account for a large share of the market due to low initial manufacturing costs, mature range and fuel supply, but are directly impacted by rising fuel carbon prices, port restrictions, and emissions testing compliance costs; on the other hand, ports and shipowners are accelerating the

adoption of hybrid power conversions, LNG dual-fuel options, or all-electric/plug-in solutions to meet the 2030/2040 phased emission reduction targets, leading to simultaneous growth in both the existing tugboat conversion market (electrification and exhaust purification) and the new construction of high-efficiency, low-carbon ASD tugboats. The ripple effects of the policy implementation also include: a significant increase in investment demand for port charging/fuel infrastructure (shore power, LNG terminals, energy conversion stations); a shift in tugboat operation models towards "short voyages, high frequency + concentrated charging windows"; the need for crew and maintenance teams to undergo electrification and high-voltage system training; the prominence of issues related to the disposal and residual value reassessment of second-hand fleets (pressure on the residual value of traditional diesel vessels); and the repricing of tugboat manufacturers' product portfolios (low-carbon option premium)?these factors collectively drive a long-term structural adjustment in the market from "CAPEX-led newbuilding" to "CAPEX + OPEX optimization." Overall, with the advancement of IMO and zero-emission reforms in ports worldwide, the ASD tugboat market will experience steady upward growth and structural transformation over the next five years, with the traditional diesel-dominated delivery ratio gradually being replaced by hybrid/dual-fuel and electrified models.

The global ASD Tugboat market size was estimated at USD 2715.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
