Abstracts

Aseptic paper for packaging refers to a specialized multi-layered material designed to maintain sterility and extend the shelf life of perishable liquid or semi-liquid products, such as dairy, beverages, sauces, and soups, without the need for refrigeration. Typically composed of layers including paperboard for rigidity, polyethylene for moisture barrier and sealing, and sometimes aluminum foil for oxygen and light protection, this packaging undergoes ultra-high temperature (UHT) processing to eliminate microorganisms before aseptic filling in a sterile environment. It enables lightweight, cost-effective, and sustainable packaging solutions while ensuring product safety, quality retention, and reduced environmental impact compared to traditional packaging formats.

The global Aseptic Paper For Packaging market size was estimated at USD 1673.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
