Report Overview:

Aseptic PET bottle filling line is a piece of equipment used to fill materials into PET bottles. It usually includes the following steps:

Bottle transportation: The bottles are transported from the bottle storage warehouse to the filling equipment through the conveyor belt. Sterile air must be used during this process to ensure that the inside and outside of the bottles are sterile.

Material filling: Use advanced non-contact filling principles to fill materials into PET bottles.

Sterilization of bottle caps: Bottle caps are usually sterilized by immersion in disinfectant. By controlling the soaking time, the sterilization effect can be well ensured.

Material filling: Since PET bottles will not shrink after cold filling, there will be some air between the material and the bottle cap, and the oxygen in it will slowly oxidize the material during storage, causing the beverage to deteriorate. Therefore, the aseptic cold filling equipment will add a nitrogen (or other inert gas) replacement system to blow away the air at the top to ensure that the material is not oxidized.

Maintenance of sterile environment: Clean room isolation measures are used to maintain the cleanliness of the sterile space environment.

The Global Aseptic PET Bottle Filling Lines Market Size was estimated at USD 404.92 million in 2023 and is projected to reach USD 607.67 million by 2029, exhibiting a
