Abstracts

Ashes to Diamonds is a new type of funeral service that transforms the ashes of the deceased into diamonds through a specific technology. The main component of human ashes is carbon, and the basic component of diamonds is also carbon. The service uses high temperature and high pressure technology to first extract carbon from the ashes, and then simulate the environment in which natural diamonds are formed to crystallize the carbon into diamonds in the laboratory. For some family members, transforming the ashes of the deceased into diamonds can make them feel that their loved ones continue to accompany them in a special way, which has a strong emotional significance. As people's demand for personalized memorial methods increases and they gradually accept new funeral concepts, more and more people are beginning to pay attention to and choose this unique service. Although this market currently accounts for a relatively small share of the entire funeral industry, it has great growth potential. In the context of increasingly tight land resources, the ashes-to-diamond service does not require a large amount of land, which is in line with the environmental protection concept of modern society. This green and sustainable funeral method has also been recognized by some people with strong environmental awareness. In some European and American countries, the service of turning ashes into diamonds has gained certain market acceptance, and there are many professional companies providing related services. In China, this service is still in the development stage, and the market awareness and acceptance are relatively low. However, as people's concepts gradually change, some people have begun to pay attention to and try this new funeral method.

The global Ashes to Diamonds market size was estimated at USD 85.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.80% during the forecast period.
