Report Overview

The assembly torque system is a system used to ensure that parts are tightened correctly and evenly during the assembly process. It controls the torque size of fasteners such as bolts and nuts during assembly through a preset torque value, so as to achieve a predetermined tightening effect. The assembly torque system can accurately control the torque applied to the fasteners to ensure uniformity and consistency of tightening force. Through precise torque control, assembly quality problems caused by over-tightening or over-loosening can be avoided, and the overall performance and reliability of the product can be improved. The assembly torque system can adapt to different types of fasteners and assembly requirements and has a wide range of applicability.
