### Report Overview

Assembly lubricant is a type of lubricant that is used during the assembly of mechanical components. It is designed to reduce friction and facilitate the smooth movement of parts during assembly. Assembly lubricants are typically applied to surfaces that will come into contact with each other, such as bearings, gears, and sliding surfaces. They help to prevent galling, seizing, and other forms of damage that can occur during the assembly process. Assembly lubricants are usually temporary and are intended to be replaced with a more permanent lubricant once the assembly is complete.
