Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Asset Locator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of asset locators will reach 14.12 million units, with an average selling price of US\$70 per unit. An asset locator is a smart terminal used for real-time or periodic location tracking and status monitoring of various tangible assets (such as vehicles, containers, pallets, logistics boxes, tools, equipment, and medical equipment). It typically integrates a positioning module (GNSS/Beidou/GPS), a communication module (cellular 4G/3G/2G, NB-IoT/LTE-M, LoRa, Wi-Fi, Bluetooth, etc.), a battery or external power supply, and multiple sensors such as temperature, humidity, vibration, and light. It can upload the asset's location, movement trajectory, and environmental data in real time to a cloud platform or management system, enabling visual and refined asset management. Its application value lies primarily in preventing loss, theft, and tampering, transport visualization, cold chain monitoring, fleet management, and regulatory compliance. The upstream supply chain for asset locator consists of core module and component manufacturers, material and power supply suppliers, and PCBA/EMS/assembly and packaging manufacturers. Key upstream components include GNSS chips/modules (such as u-blox), cellular/LPWA modules (such as Quectel and Fibocom), UWB/LoRa/BT chips, accelerometers, temperature and humidity sensors (such as Bosch and STMicro), antennas and RF components (such as Murata and Taoglas), battery and power management (such as Panasonic and Samsung), and PCB/assembly and testing services (EMS). The midstream supply chain consists of OEM/ODM manufacturers responsible for device design, firmware and multi-mode positioning algorithm integration, packaging, and regulatory compliance. Downstream supply chains include industry customers such as logistics and fleet management,

warehouse/pallet management, cold chain and medical equipment management, rental and shared equipment, port/container operators, insurance, and government regulators. Supporting cloud platforms and data service providers contribute significantly to the overall value of the devices (device + connectivity + platform = a complete solution).

The global Asset Locator market size was estimated at USD 988.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.90% during the forecast period.
