Assistant swimming boards, commonly referred to as kickboards, are buoyant flotation devices used primarily in swim training to isolate and strengthen lower body movements, particularly the legs and core, while allowing swimmers to focus on kicking technique without the need for full-body coordination. These boards are typically made from durable, water-resistant materials such as EVA foam or polyethylene, designed in various shapes—including rectangular, triangular, or hybrid designs—to cater to different skill levels and training objectives, from beginners learning basic propulsion to competitive athletes refining their kick efficiency and endurance. The product serves as an essential tool in swim instruction, rehabilitation programs, and fitness routines, promoting water safety, skill development, and cardiovascular exercise in both recreational and professional aquatic environments.
