Abstracts

Asthma compressor nebulizer is a medical device that, based on the principle of Venturi jet, compresses air or oxygen to form a high-speed airflow through a small nozzle, generating negative pressure. This drives liquid asthma treatment drugs to pass through the small nozzle and collide with obstacles at high speed. After the impact, the droplets splash into mist like particles and are sprayed out through the trachea, directly delivered to the lungs through the respiratory tract, thereby rapidly relieving a series of symptoms of asthma.

The global Asthma Compressor Nebulizer market size was estimated at USD 5370.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.80% during the forecast period.
