## Abstracts

Asymmetric IGCT (AIGCT) modules are a specific type of Integrated Gate Commutated Thyristors (IGCTs) that possess an asymmetric blocking capability. Unlike traditional IGCT modules that have symmetrical voltage-blocking characteristics, AIGCT modules can block higher voltages in one direction than the other. The "asymmetric" aspect refers to the module's ability to block a higher voltage in one polarity (for example, positive) compared to the other (negative) polarity. This feature enables more efficient and optimized circuit designs in certain applications where unidirectional high-voltage blocking capability is required. Major manufacturers in the market include Hitachi Energy, Zhuzhou CRRC, etc., and the industry is highly concentrated. In 2022, the share of major manufacturers will account for more than 90%.

The global Asymmetric IGCT Modules market size was estimated at USD 309.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
