Report Overview

Most of the time, genetic testing is done through healthcare providers such as physicians, nurse practitioners, and genetic counselors. Healthcare providers determine which test is needed, order the test from a laboratory, collect and send the DNA sample, interpret the test results, and share the results with the patient. Often, a health insurance company covers part or all of the cost of testing. Direct-to-consumer genetic testing is different: these genetic tests are marketed directly to customers via television, print advertisements, or the Internet, and the tests can be bought online or in stores. Customers send the company a DNA sample and receive their results directly from a secure website or in a written report. Direct-to-consumer genetic testing provides people access to their genetic information without necessarily involving a healthcare provider or health insurance company in the process.

The global At-home Genetic Testing market size was estimated at USD 1575 million in 2023 and is projected to reach USD 5989.66 million by 2032, exhibiting a CAGR of 16.00% during the forecast period.

North America At-home Genetic Testing market size was estimated at USD 530.69 million in 2023, at a CAGR of 13.71% during the forecast period of 2024 through 2032.
