Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Atactic 1-Butene Polymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Atactic 1-butene polymers reached approximately 200 kilotons, with an average global market price of around USD 1900 per ton. Atactic 1-butene polymers are a type of poly(1-butene) characterized by a random arrangement of pendant methyl groups along the polymer chain, resulting in a lack of stereoregularity. Unlike isotactic or syndiotactic counterparts, atactic 1-butene polymers do not crystallize effectively and are generally amorphous in nature. This amorphous structure imparts properties such as low tensile strength, softness, tackiness, and low melting temperature. Due to these characteristics, atactic 1-butene polymers are typically used as tackifiers, adhesives, or modifiers in polymer blends rather than as structural materials. They are often produced as by-products during the polymerization of isotactic poly(1-butene).

The global Atactic 1-Butene Polymers market size was estimated at USD 378.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Atactic 1-Butene Polymers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
