Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Atactic Polypropylene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Atactic Polypropylene production reached approximately 640 kilotons, with an average global market price of around US\$ 1,750 per ton. Atactic Polypropylene (aPP) is a form of polypropylene polymer characterized by a random, irregular arrangement of methyl groups along the polymer backbone, resulting in an amorphous structure. Unlike isotactic polypropylene (iPP), which is highly crystalline and rigid, aPP is soft, tacky, and rubber-like at room temperature due to its lack of stereoregularity. It is typically produced as a by-product during the synthesis of isotactic polypropylene through Ziegler-Natta catalysis, though it can also be manufactured intentionally for specific applications. Its amorphous nature imparts excellent flexibility, low crystallinity, and good compatibility with other polymers, making it suitable as a plasticizer, sealant base, or modifier in adhesives, roofing membranes, bitumen blends, and polymer composites.

The global Atactic Polypropylene market size was estimated at USD 1138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
