Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Atactic Polystyrene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Atactic Polystyrene production reached approximately 120 kilotons, with an average global market price of around US\$ 1,300 per ton. Atactic Polystyrene is a form of polystyrene polymer characterized by a random arrangement of phenyl groups along the polymer chain, resulting in an amorphous and non-crystalline structure. Unlike isotactic or syndiotactic polystyrene, which have ordered stereochemistry, atactic polystyrene lacks regularity in the positioning of its side groups, giving it a rubbery and soft consistency at room temperature. It is typically produced as a byproduct during the stereospecific polymerization of styrene and is not widely used commercially due to its poor mechanical strength and thermal resistance. However, it is sometimes utilized in research and specialty applications, such as modifying the properties of other polymers or in adhesives and sealants. Atactic Polystyrene is primarily driven by its role as a byproduct in styrene polymerization, with niche market demand arising from its use in pressure-sensitive adhesives, hot-melt adhesives, and as a compatibilizer in polymer blends. Its amorphous, rubbery structure makes it valuable for enhancing tackiness, flexibility, and processability in specialty formulations. Additionally, its low cost and solubility support applications in coatings, sealants, and polymer research, where its disordered architecture is beneficial for tuning material properties. While not widely used on its own, atactic polystyrene finds relevance in additive roles across several industrial segments.

The global Atactic Polystyrene market size was estimated at USD 146.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the

forecast period.
