## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Atactic Polyvinyl Acetate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Atactic Polyvinyl Acetate (a-PVAc) is a type of polyvinyl acetate characterized by a random arrangement of acetate groups along the polymer chain, resulting in an amorphous, non-crystalline structure. Unlike isotactic or syndiotactic forms, the atactic configuration lacks regular stereoregularity, leading to a soft, tacky, and rubber-like material with low melting points and poor mechanical strength. Due to its amorphous nature, a-PVAc is typically used in pressure-sensitive adhesives, emulsions for paints and coatings, paper and wood glues, and as a component in chewing gum bases. It is synthesized via free-radical polymerization of vinyl acetate monomers and is valued for its flexibility, film-forming ability, and adhesive properties.

The global Atactic Polyvinyl Acetate market size was estimated at USD 1849.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
