Abstracts

The atmospheric particulate matter online analyzer is an instrument used to monitor and analyze the concentration and composition of particulate matter in the atmosphere. Atmospheric particulate matter refers to solid or liquid tiny particles suspended in the air, including fine particulate matter (PM_{2.5}) and inhalable particulate matter (PM₁₀). They come from activities such as industrial emissions, traffic exhaust, coal and oil burning, and have an important impact on air quality and human health. The atmospheric particulate matter online analyzer collects particulate matter samples in the atmosphere and uses a series of physical, chemical or optical methods for measurement and analysis. It can monitor the concentration, size distribution, chemical composition and other parameters of particulate matter in real time and provide accurate particulate matter monitoring data. Online atmospheric particulate matter analyzers usually include particulate matter sampling systems, particulate matter analysis instruments and data processing systems. Particulate matter sampling systems are used to collect particulate matter samples in the atmosphere, which can be done through adsorption, deposition or filtration. Particle analysis instruments measure and analyze particle samples based on different principles and methods, including mass concentration, particle size distribution, chemical composition and other parameters. The data processing system is used to receive, store and process particulate matter monitoring data and generate corresponding reports and charts. Online air particle analyzers have important application value in environmental monitoring, air pollution control, health assessment and other fields. It can provide accurate particulate matter monitoring data, help governments and environmental protection departments formulate and implement corresponding environmental protection policies and measures, and ensure public health and the sustainable development of the ecological environment.

The global Atmospheric Particulate Matter Online Analyzer market size was estimated at USD 185.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
