?Atmospheric pressure photoionization (APPI) is a soft ionization technique used in liquid chromatography-mass spectrometry that uses photochemistry to ionize samples in the gas phase??. The basic principle of APPI is to use an ultraviolet light source to interact with gaseous analytes to ionize them, and then introduce them into a mass spectrometer for analysis. During this process, both the analyte and the solvent may be excited, and the analyte may also acquire protons from the protic solvent to form ions. APPI has a wide dynamic range and is widely used in medicine, chemistry, food, environmental science and other fields.

The global Atmospheric Pressure Photoionization Appi market size was estimated at USD 478.95 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
