Report Overview

Atomic Layer Deposition (ALD) is defined as the chemical process of depositing thin-film layer based on the sequential use of a gas phase mechanism. It is a vapour phase technique which involves exposing the surface of a substrate to alternating precursors so that they do not overlap on each other. In other word ALD is a thin-film deposition technique which is based on the sequential use of a gas phase chemical process. It is widely used in the semiconductor manufacturing industry to make electronics small and miniaturized. This technology involves the use of new and highly competitive products transformed into ultra-thin films of a few nanometres deposited in a precisely controlled way. It depends upon self-limiting surface reactions which provides very low pin-hole shape and has wide range of applications in fabrication of semiconductor devices and tools using nanotechnology.
