Report Overview

ATSC 3.0 is a major version of the ATSC standards for television broadcasting created by the Advanced Television Systems Committee (ATSC). ATSC 3.0 comprises around 20 standards covering different aspects of the system and in total will have over 1,000 pages of documentation. The standards are designed to offer support for newer technologies, including HEVC for video channels of up to 2160p 4K resolution at 120 frames per second, wide color gamut, high dynamic range, Dolby AC-4 and MPEG-H 3D Audio, datacasting capabilities, and more robust mobile television support. The capabilities have also been foreseen as a way to enable targeted advertising and finer public alerting. ATSC 3.0 is a major upgrade for antenna TV, designed to allow for 4K resolution and even a major sound upgrade to broadcast TV. The switch could be as significant as the transition from analog broadcasts to digital HD - except this time it's going to be a whole lot easier. ATSC 3.0 was initially launched in 2017 in South Korea, mainly in preparation for the 2018 Winter Olympics.

The global ATSC 3.0 Devices market size was estimated at USD 3174.90 million in 2023 and is projected to reach USD 38364.82 million by 2032, exhibiting a CAGR of 31.90% during the forecast period.

North America ATSC 3.0 Devices market size was estimated at USD 1341.55 million in 2023, at a CAGR of 27.34% during the forecast period of 2024 through 2032.
