Report Overview:

Auger Tunnel Boring Machines are used to install piping underneath roadways and other infrastructure. The auger is laid into a launch pit on tracks and is slowly pushed through the ground by the machine. Casings are pushed into the bore as the auger progresses in order to keep the bore open. As each casing segment is added, a segment of helical auger is also added so that the soil is removed throughout the bore while the auger excavates the tunnel face. Once the auger reaches the receiving pit, the bore contains empty casings ready to receive the product pipe.

The Global Auger Tunnel Boring Machine Market Size was estimated at USD 331.66 million in 2023 and is projected to reach USD 398.33 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
