Abstracts

Augmented Reality (AR) Training Simulator Software is intended to train users for a certain role in a partially virtual environment. Trainees utilize the augmented reality in these solutions to learn the vital skills needed for a new job. These differ from virtual reality training simulators, as the latter provides training simulations to users in a completely immersive, virtual environment. By integrating 3D images into the real world using a phone or other mobile device with a camera, AR training simulators replicate real-life situations, which makes the learning experience more retainable and engaging. AR training simulators allow users in high-stress careers to develop skills necessary for the job before they are put in the field. These solutions tend to be used by those in hands-on careers, such as medicine or law enforcement. AR training simulators can also be of use to those in more niche careers, like aviation and transportation. Some AR training simulators may have augmented reality SDK functionalities, which means that developers can customize their specific AR training simulator platform to fit the needs of their organization.

The global Augmented Reality (Ar) Training Simulator Software market size was estimated at USD 758.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.45% during the forecast period.
