Abstracts

Augmented and Virtual Reality eyeglasses are wearable devices that overlay digital information onto the user's real-world view (AR) or immerse them in a completely digital environment (VR). AR glasses project virtual images onto transparent lenses, enabling users to interact with digital content while maintaining awareness of their surroundings. VR glasses, on the other hand, use opaque displays to block out the real world and provide a fully immersive experience. These devices integrate sensors, cameras, and displays to create interactive and immersive experiences, finding applications in gaming, education, training, and industrial settings.

The global Augmented Virtual Reality Eyeglass market size was estimated at USD 6930.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 21.30% during the forecast period.
