Report Overview

Austenitic-Ferritic Duplex Stainless Steel is a type of stainless steel that combines the properties of both austenitic and ferritic stainless steels. This alloy is characterized by its balanced microstructure, which consists of approximately equal proportions of austenite and ferrite phases. The austenitic phase provides excellent toughness, formability, and resistance to stress corrosion cracking, while the ferritic phase offers improved strength, resistance to pitting, and chloride stress corrosion cracking. Austenitic-Ferritic Duplex Stainless Steel is known for its high resistance to general and localized corrosion, making it suitable for use in aggressive environments such as chemical processing, marine applications, and paper and pulp industries. The material's dual-phase structure also results in superior mechanical properties, including high strength and hardness, compared to traditional austenitic or ferritic stainless steels.
