Abstracts

Auto destruct syringes are specialized single-use medical devices designed with an integrated mechanism that renders them inoperable after a single injection, preventing reuse and thereby reducing the risk of needlestick injuries and cross-contamination. These syringes typically feature a locking mechanism or a retractable needle that permanently disables the device once the plunger is fully depressed, ensuring compliance with safety protocols in healthcare settings. They are particularly critical in immunization programs and environments with high infection risks, as they address both patient and healthcare worker safety by minimizing accidental needle exposures and curbing the spread of bloodborne pathogens.
