## Abstracts

Laminated glass for automobiles has one more layer of laminated layer than ordinary tempered glass. Most of them are PVB or EVA. It is mainly a glass obtained by heating ordinary flat glass or float glass to a temperature close to the softening point, then rapidly cooling or chemically treating it. It has the characteristics of impact resistance, low temperature rapid change resistance, thermal stability and high mechanical strength. The global chemical industry is part of the global economic development, and the cyclical economic development envelopes the global chemical industry. In recent years, global economic growth has slowed down, and the growth rate of the chemical industry has also gradually slowed down. The development of emerging economies such as China and India has continued to promote the global chemical industry to maintain a certain development trend in the past few years. In the future, these economies will continue to drive the chemical industry market forward with their large population base and strong domestic demand growth. In addition to the influence of the geopolitical characteristics of the Middle East, the shale gas industry in the United States among developed countries has become the biggest variable in recent years, driving the strong development of the U.S. chemical industry.

The global Auto Double Laminated Glass market size was estimated at USD 3780.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
