Abstracts

Auto floor scrubbers are specialized machines designed for efficient and automated floor cleaning. They are commonly used in commercial and industrial settings, such as supermarkets, warehouses, and manufacturing facilities. Auto floor scrubbers typically have a motorized scrubbing head with rotating brushes or pads that agitate and scrub the floor surface, loosening dirt and grime. They also have a system for dispensing water or cleaning solution onto the floor to aid in the cleaning process. Some models may include additional features such as vacuum suction to remove dirty water from the floor. These machines are designed to cover large areas quickly and efficiently. They often have adjustable speed settings, allowing operators to customize the cleaning process to suit different floor types and levels of dirtiness. Some models also have built-in sensors and navigation systems that enable them to autonomously navigate obstacles and optimize cleaning routes. Auto floor scrubbers also minimize the use of water and cleaning solution, making them more environmentally friendly compared to traditional cleaning methods. They often have features that help control and contain the water and cleaning solution, minimizing waste and reducing the risk of slips and falls from wet surfaces.

The global Auto Floor Scrubbers market size was estimated at USD 2220.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
