Report Overview

This report focus on Auto Orbital Polishers market.

With an orbital polisher the spindle and pad move about different axis causing the pad to vibrate, oscillate, or orbit (much like the Earth around the Sun). Beneath the Orbital type of polisher there are sub types of Fixed Orbital, Dual Action Random Orbital, and Dual Action Forced Rotation.

Unlike rotary polishers, which spin in a single direction forced rotation, dual action orbital polishers, which oscillate or wobble while spinning, are super safe to use. There is little to no risk of burning up or swirling your paint when using a dual action orbital buffer.
