Abstracts

An automated analyser is a medical laboratory instrument designed to measure different chemicals and other characteristics in a number of biological samples quickly, with minimal human assistance. Major factors contributing to the growth of the market include compulsion from the respective governments and industries to comply with the regulations, and the growing demand for the integrated healthcare systems. The shift from the legacy systems to commercial solutions was favored by the laboratories, as they provide flexible and reliable methods to manage data, resources, and workflows. Increase in the number of clinical and pre-clinical studies, the need for quicker analysis of samples, and efficient testing processes, along with the increasing stringency of regulation, are driving the growth of the market.
