## Abstracts

Automated Border Control systems (ABC) or eGates are automated self-service barriers which use the data stored in the chip in biometric passports to verify the user's identity. Travellers undergo biometric verification using face, fingerprint, iris recognition or a combination of modalities. After the identification process is complete, a physical barrier such as a gate or turnstile opens to permit passage. Of all the major applications of ABC, airport holds the largest share of the ABC market. The demand for ABC across airports is growing owing to the increasing passenger traffic across the globe. The increasing passenger traffic at airports is mainly because of the increasing travel and tourism activities and economic development across the globe.
