Abstracts

Automated carbon coaters are specialized vacuum deposition systems designed to apply uniform, thin layers of amorphous carbon onto samples, primarily to enhance conductivity and reduce charging effects in electron microscopy applications such as scanning electron microscopy (SEM) and transmission electron microscopy (TEM). These systems integrate automation for precise control over coating parameters?including thickness, deposition rate, and uniformity?while minimizing manual intervention, thereby improving reproducibility, throughput, and user safety in laboratory and industrial settings. Their functionality often includes programmable cycles, vacuum monitoring, and compatibility with various sample types and sizes, making them critical for materials science, life sciences, nanotechnology research, and quality control processes where high-resolution imaging and analysis are required.

The global Automated Carbon Coaters market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
