The automated cloud cost optimization platform is an intelligent tool based on cloud computing environments that automatically analyzes, monitors, and optimizes cloud service resource usage to reduce enterprise costs on cloud platforms. Through real-time data analysis, the platform identifies overutilized or idle resources and provides automated adjustment recommendations or direct resource scheduling to achieve optimal resource allocation and cost control. By optimizing cloud infrastructure usage, enterprises can reduce unnecessary expenses while ensuring efficient and scalable business operations. The automated cloud cost optimization platform's downstream customers primarily include various cloud computing resource-intensive enterprises and organizations, including internet companies, Software-as-a-Service (SaaS) providers, financial institutions, e-commerce platforms, gaming companies, and large manufacturing enterprises. Downstream users can use the platform to monitor cloud resource usage in real time, identify idle or inefficient resources, and automatically adjust compute and storage configurations, thereby optimizing cloud costs, improving resource utilization, and ensuring business performance. Furthermore, as enterprises expand their cloud migration and cloud service costs continue to rise, demand for automated cloud cost optimization platforms in scenarios such as cloud operations management, IT financial management, DevOps process optimization, and multi-cloud environment governance is growing, creating a significant downstream market opportunity. The automated cloud cost optimization platform has a gross profit margin of 73%. The automated cloud cost optimization platform is a crucial tool for enterprise digital operations and cloud resource management. Through real-time monitoring, intelligent analysis, and policy enforcement, it enables refined management and cost optimization of cloud resources, including compute, storage, and networking. This platform not only helps enterprises reduce cloud service expenses and improve resource utilization, but also enhances business resilience and operational efficiency,

providing a unified management perspective for multi-cloud and hybrid cloud environments. As enterprises continue to expand their cloud migration, cloud service costs continue to rise, and digital transformation drives increased demand for cost controllability and operational efficiency, the automated cloud cost optimization platform holds broad application prospects and is becoming a crucial support tool for enterprise cloud strategic management and intelligent operations.
