Abstracts

An Automated Fare Collection (AFC) System is a technology-driven ticketing and payment solution used primarily in public transportation to automate the process of collecting fares from passengers. In simple terms, an AFC system replaces or reduces the need for manual ticket counters, paper tickets, and conductors by enabling cashless, contactless, and self-service payment and access, making fare payment faster, more convenient, and more secure for both transit operators and passengers.

- 1. Growing Urbanization and Rising Demand for Public Transport** Rapid urbanization is putting enormous pressure on urban mobility systems. Cities worldwide are expanding and modernizing their public transport to handle increasing passenger volumes efficiently. AFC systems are integral to this modernization, offering scalable solutions for high-throughput ticketing and enabling multimodal travel.
- 2. Government Initiatives for Smart and Sustainable Transportation** Many governments have launched smart city projects that prioritize digital ticketing and contactless payment systems as part of broader efforts to reduce congestion and pollution. AFC systems align with these goals by enabling integrated ticketing across buses, metros, trams, and even bike-sharing services.
- 3. Increasing Need for Efficient Revenue Management** Transport operators face revenue leakage and fare evasion challenges with manual or semi-automated ticketing. AFC systems reduce human error, detect fraud in real time, and provide detailed data analytics for demand forecasting and operational optimization. This data-driven approach ensures better financial sustainability for transit agencies.
- 4. Technological Advancements: Mobile and Contactless Payments** The widespread adoption of smartphones and contactless bank cards has transformed payment behavior. Commuters increasingly prefer tap-and-go or scan-and-go payment methods over cash. AFC systems have adapted by integrating mobile apps, QR codes, and open-loop payments (direct bank card use without issuing a transport card), making fare payment more convenient.

The global Automated Fare Collection System market size was estimated at USD 5614.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
