Abstracts

An automated foam-in-place packaging system is an integrated packaging equipment that combines automation and intelligence. It mainly consists of a foaming agent supply system, mixing system, molding mold or conveying device, control system and detection and feedback system. The system precisely mixes the foaming agent and other materials in the mixing system. Then, the foaming liquid is evenly sprayed or poured onto the product surface or into the gap between the product and the packaging container through a nozzle or pouring device, and solidifies to form a protective layer. Controlled by a program, it can adjust parameters according to product requirements, achieving customized packaging with high efficiency, energy-saving and stable quality, thus reducing labor costs and protecting products during transportation and storage.

The global Automated Foam-in-place Packaging System market size was estimated at USD 192.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
