Abstracts

An Automated Guided Vehicle (AGV) is an intelligent transport vehicle equipped with automatic guidance devices that can travel along a prescribed path. Its body is equipped with programming and parking selection devices, safety protection devices, and various material handling functions. Powered by batteries, it typically relies on automatic guidance devices such as magnetic strips, tracks, or lasers to travel along a planned route. Multiple AGVs, along with control computers, navigation equipment, charging equipment, and surrounding auxiliary equipment, can form an AGV system. An Autonomous Mobile Robot (AMR) is a robot with understanding capabilities and the ability to move independently within its environment. It is generally wheeled or humanoid and carries various sensors. Through programming, it achieves autonomous movement and can use intelligent algorithms to analyze data perceived by multimodal sensors (such as lidar, cameras, ultrasonic radars, etc.) to form an understanding of the on-site environment. Based on this understanding, it autonomously selects the most effective method and path to execute tasks.

The global Automated Guided Vehicles and Autonomous Mobile Robots market size was estimated at USD 13130.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.00% during the forecast period.
