Abstracts

Automated Liquid Handling Robots are robots used in Biological laboratories which perform a number of liquid handling tasks that are otherwise done manually. Typically liquid handling robots are used for pipetting, sample preparation, and microplate washing. They help you minimize human error, increase precision and accuracy, and speed up a lab workflow. They are successfully being used to automate a variety of workflows, as diverse as sample preparation for PCR or mass spectrometry; DNA extraction for subsequent analysis such as next-generation sequencing (NGS); and performing cell-based assays or ELISAs for drug screening. The market drivers for ALHRs are the increased outsourcing of pharmaceutical research, increased funding for life sciences research and development, growth in the pharmaceutical and biotechnology sectors, increasing demand for high throughput screening, and rising focus on genomics and proteomics research. The constraints of ALHRs are the lack of standardized and uniform technologies to integrate with existing infrastructure, high initial investment and maintenance costs, data privacy and security issues, and interoperability challenges among different systems. The future opportunities for ALHRs are the integration of artificial intelligence and machine learning for liquid handling analysis and prediction, the adoption of cloud-based and IoT-based solutions for liquid handling management, the emergence of connected and autonomous liquid handling systems, and the expansion of smart mobility services.

The global Automated Liquid Handling Robots market size was estimated at USD 2296.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
