Abstracts

Automated parcel sorters are a type of sorting system specifically designed for the efficient handling and sorting of incoming and outgoing mail, packages, and other items. These systems use a combination of conveying technology, sensors, and robotics to automate the sorting process, significantly reducing the need for manual handling and sorting. An automated parcel sorter typically includes a series of conveying belts or chutes that transport items to various sorting destinations based on their characteristics or destination codes. Items enter the sorter on one end and are automatically routed to the appropriate destination based on preset sorting criteria. With the rapid development of e-commerce and logistics industries, the demand for automatic parcel sorting machines is also growing. Automatic parcel sorting machines can improve sorting efficiency and accuracy and reduce labor costs, so they are more and more widely used in the logistics industry.
