Abstracts

Automated Pathology Staining System is a highly specialized laboratory instrument designed to perform precise and consistent staining of biological tissue samples for histopathological analysis. This system automates the application of stains, reagents, and dyes to tissue sections mounted on glass slides, ensuring uniformity and reducing human error in the staining process. It is widely used in medical laboratories, hospitals, and research institutions to prepare samples for microscopic examination, particularly in diagnosing diseases such as cancer. These systems typically support a variety of staining techniques, including hematoxylin and eosin (H&E) staining, immunohistochemistry (IHC), and in situ hybridization (ISH). Equipped with programmable protocols, temperature control, and robotic arms, automated pathology staining systems improve workflow efficiency, increase throughput, and enhance diagnostic accuracy. By standardizing staining procedures, they enable pathologists to obtain high-quality, reproducible results while reducing manual labor and exposure to hazardous chemicals.

The global Automated Pathology Staining System market size was estimated at USD 1018.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
