Abstracts

An automated perfusion system is a medical device used in laboratory and clinical settings to supply continuous nutrient flow to cells, tissues, or organs in culture, simulating the natural blood flow found in living organisms. These systems are essential in research, drug testing, and organ transplantation, as they maintain cell viability over long periods. Automated perfusion systems provide precise control over parameters such as flow rate, temperature, and pressure, ensuring optimal conditions for cellular growth and function. Their ability to mimic physiological conditions makes them indispensable tools in regenerative medicine and cell-based therapies.
