Report Overview

Automated Peritoneal Dialysis (APD) is a type of home dialysis that uses a machine called an automated cyclor to perform the exchanges of dialysate fluid in the peritoneal cavity. The peritoneal cavity is the space between the abdominal wall and the organs inside the abdomen. The dialysate fluid is a special solution that helps remove waste products and excess fluid from the blood through the peritoneum, which is the membrane that lines the peritoneal cavity and has many tiny blood vessels. APD is usually done at night while the patient sleeps, leaving the daytime free for other activities. APD is one of the forms of peritoneal dialysis (PD), which is considered a gentle and convenient way of replacing kidney function for people with kidney failure.

The global Automated Peritoneal Dialysis (Apd) market size was estimated at USD 1250.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
