Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automated Pet Feeder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Automatic pet feeders help manage pet feeding by dispensing food to pets at predetermined intervals and in predetermined quantities. Automatic pet feeders can automatically complete pet feeding operations without human intervention, ensuring the regularity of pet diet and solving the problem of not being able to feed pets properly when the owner is not at home. Automatic pet feeders are widely used in homes, pet shops, pet hotels and other places, and can provide pets with food and water around the clock. In this era, almost everyone wants to keep pets at home because they believe that keeping pets at home can relieve the stress, boredom and loneliness of daily life. However, in developing countries, citizens' activity levels are very high, and they often neglect to provide food and water to pets, so that they do not get timely attention. Because they are busy with various activities, they rarely have time to supervise pets at home. Providing food to pets in adjustable quantities within a predetermined time has become an indispensable task in the current situation. The household penetration rate of the European pet market is relatively high. According to FEDIAF data, in 2020, there were about 88 million households in Europe keeping pets, and the pet household penetration rate was about 38%, a growth rate of 3.41% compared with 85 million in 2019. Cats and dogs are still the mainstream of the European pet market. In 2020, Romania and Poland are the countries with the highest pet household penetration rates in Europe, with the household penetration rate of cats and dogs reaching about 42%; followed by the Czech Republic, where the household penetration rate of cats and dogs also exceeded 40%. In recent years, with the rise of the concept of pet keeping in my country, the domestic pet industry has entered a stage of rapid development. In the

future, as the concept of pet raising becomes more popular, the penetration rate of pet households will further increase, and the size of the pet market will also increase accordingly. As people's awareness of pet care increases and the size of the pet market expands, the pet automatic feeder market is also gradually expanding. It is expected that the global pet automatic feeder market will grow further in the next few years.

The global Automated Pet Feeder market size was estimated at USD 1418.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
