Abstracts

The Automated Pipetting Systems also called automated liquid handling workstation, is a highly efficient and automated experimental equipment, which is mainly composed of sampling system, distribution system, detection system, transmission system, control system and software system. Automated liquid handling workstation is used in automation of Pharmaceutical or biochemical laboratories. It is a robot that dispenses a selected quantity of reagent, samples or other liquid to a designated container. Reducing processing time, decreasing sample contamination, and increasing accuracy in bioassays is possible with Automated liquid handling workstation. These systems release researchers from long, repetitive, laborious tasks, and free up time for other assays, lab reports and other lab duties. Robotic arms distribute accurate measurements of liquids to vessels, such as microtiter plates and change out plates or tubes, thus streamlining workflow. North America and Europe are the main production and consumption places of automated liquid handling workstations, and the two places occupy a large market share. This is mainly due to the relatively developed life science research and pharmaceutical industries in these regions, which have a high demand for automated equipment. In the field of biopharmaceuticals, automated liquid handling workstations can be used in drug research and development, clinical trials, drug production and other links, such as high-throughput screening, gene sequencing, protein analysis, etc. Asia Pacific is expected to grow at the fastest CAGR from 2024 to 2030. Increasing investment in R&D activities, particularly in countries like China, Japan, and India, propel the demand for advanced liquid handling technologies. Supportive government initiatives, a burgeoning biopharmaceutical sector, and the presence of key market players further fuel the robust growth of the regional market. In 2023, China held for the largest revenue share in Asia Pacific region, due to its strategic focus on advancing R&D capabilities, particularly in the pharmaceutical and biotechnology sectors. With a rapidly growing biopharmaceutical industry and

supportive government initiatives, China has become a key market for automation solutions. In China, the key players of automated liquid handling workstation include Hamilton Robotics, Tecan, etc. Global top three manufacturers hold a share over 35%. The China automated liquid handling workstation are mainly produced in North America and Europe, they occupied for a share over 65%. East China is the largest China market of automated liquid handling workstation, with a share about 48%, followed by North China and Central China, with share 17% and 13%, separately. In terms of product type, contact liquid handling workstations are the largest segment, accounting for about 96% share, while in terms of application, biopharmaceutical companies are the largest downstream field, accounting for about 63%.

The global Automated Pipetting Systems market size was estimated at USD 1265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
