Smart irrigation solutions rely on detection equipment such as smart sensors and collectors to detect water and fertilizer, and feed back data information to the cloud platform through wireless transmission technology. The cloud platform flexibly allocates and supplies water and fertilizer based on the water and fertilizer needs of crops at different growth stages, as well as details such as soil moisture and nutrient content. While improving irrigation water efficiency, it also achieves regular quantitative control of water and fertilizer management, effectively reducing labor input and promoting the transformation of agriculture from traditional labor-intensive to technology-intensive.
