## Abstracts

The automatic apple peeling, core removal and slicing machine is an advanced fruit processing equipment that can automatically complete multiple actions such as peeling, core removal (peeling or cutting the end) and slicing of apples. The automatic apple peeling, core removal and slicing machine uses mechanical principles and is controlled by PLC (programmable logic controller). The peeling knife can automatically follow the changes in the apple's appearance to perform peeling operations. The peeling thickness is adjustable to ensure less peeling fruit damage and high pulp utilization. After setting the relevant parameters and actions on the touch screen, put the apples into the hopper of the equipment, and the equipment automatically performs peeling, core removal and slicing operations. At the same time, the liquid in the color protection tank circulates and sprays the peeled apples to prevent them from oxidizing and turning black. It is mainly suitable for the processing of apples and other core fruits and vegetables. It is a necessary equipment for processing canned food, preserved fruits, dried fruits, fruit powder, jam, fruit cake, juice and other products. As a kind of fruit processing equipment, the demand for automatic peeling, core-removing and slicing machines for apples in homes and commercial places is increasing with the improvement of people's quality of life and the increase of time costs. Consumers have an increasing demand for multifunctional, intelligent and energy-efficient apple peeling machines, expecting to meet various needs such as peeling and slicing, and expecting to be able to control and monitor the peeling process through mobile phone APP and other methods. The future development direction will pay more attention to intelligent and customized services, using machine vision technology to realize automatic identification of fruit size and quality, accurately control peeling thickness and reduce waste; the application of Internet of Things technology will enable the equipment to remotely monitor and optimize operating parameters and improve production efficiency. In summary, the market for automatic peeling, core-removing and slicing machines for

apples is in a stage of steady growth. In the future, with the continuous advancement of technology and the continuous changes in consumer demand, the market will continue to maintain an active development trend.

The global Automatic Apple Peeling and Slicing Machine market size was estimated at USD 77.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
