Report Overview:

An automated (car) parking system (APS) is a mechanical system designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an APS provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The APS, however, utilizes a mechanical system to transport cars to and from parking spaces (rather than the driver) in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking garage is similar to multiple parking lots stacked vertically, an APS is more similar to an automated storage and retrieval system for cars.

The Global Automatic Car Parking Systems Market Size was estimated at USD 2345.89 million in 2023 and is projected to reach USD 3072.54 million by 2029, exhibiting a CAGR of 4.60% during the forecast period.
