Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automatic Digital Pathology Slide Scanning System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An automated system designed for scanning and digitizing pathology slides, enabling the capture of high-resolution digital images of tissue samples for analysis, storage, and sharing. This system is commonly used in medical diagnostics and research to facilitate virtual slide viewing and remote consultation. In 2024, global Automatic Digital Pathology Slide Scanning System sales volume reached approximately 1100 units, with an average global market price of around 124 K US\$ per unit. One of the primary drivers is the increasing incidence of cancer and other chronic diseases worldwide. Pathology plays a critical role in disease diagnosis, prognosis, and treatment planning. With rising patient volumes, laboratories require efficient, high-throughput solutions to manage slide analysis. Automatic digital slide scanners streamline workflows by enabling rapid digitization, reducing manual handling errors, and supporting faster turnaround times, directly addressing the growing demand for timely and accurate diagnostics. Healthcare systems are increasingly embracing digital pathology as a standard practice. Digital slide scanning facilitates remote diagnostics, enabling pathologists to review cases from different locations, collaborate across institutions, and provide telepathology services. The adoption of telemedicine, accelerated by the COVID-19 pandemic, has further reinforced the need for reliable digital slide scanning systems, particularly in regions with limited access to expert pathologists. The integration of AI and machine learning algorithms with digital pathology slide scanners is a major market driver. AI-powered image analysis improves diagnostic accuracy, aids in identifying rare pathological features, and automates

quantification of biomarkers. As the demand for precision medicine rises, laboratories and research centers increasingly invest in digital slide scanning systems that can seamlessly interface with AI platforms to enhance analytical capabilities. Automatic digital pathology slide scanners address the growing need for workflow efficiency and automation in laboratories. High-throughput scanners can process hundreds of slides per day, reduce human intervention, and minimize errors associated with manual microscopy. This efficiency is particularly valuable in high-volume diagnostic laboratories, academic research centers, and pharmaceutical companies conducting drug development studies.

The global Automatic Digital Pathology Slide Scanning System market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.10% during the forecast period.
