Report Overview

An automatic door side sensor is a device used in automatic doors to detect the presence of a person or object on the side of the door. It operates by emitting and receiving signals, such as infrared or microwave, to determine if there is an obstruction in the path of the door. When the sensor detects someone or something approaching the door, it sends a signal to the door control system, which activates the door's opening mechanism. This allows the door to open automatically without the need for manual intervention. Automatic door side sensors are commonly used in various settings, including commercial buildings, hospitals, airports, and retail stores.
